The Compliance Decade

Climate disclosure stopped being a report and became a **filing obligation**. Here is what actually changed across three markets — the dates, the thresholds, the stress tests — and what it costs the companies now inside the net.

JURISDICTIONS MOVING TO ISSB STANDARDS³

\$38^{tn}

ANNUAL CLIMATE DAMAGES COMMITTED BY 2050¹

3

MARKETS, ONE CONVERGENT STANDARD

³ IFRS Foundation — jurisdictional profiles on ISSB Standards adoption · 12 Jun 2025

¹ Kotz, Levermann & Wenz — “The economic commitment of climate change”, Nature 628 · 17 Apr 2024

Disclosure moved from the brochure to the ledger.

For a decade, sustainability reporting was voluntary, narrative and unaudited. Between 2024 and 2026 three things happened at once — and together they changed the nature of the work.

It became law

Australia legislated mandatory climate reporting under the Corporations Act, commencing 1 January 2025.⁴ Singapore set an ISSB-aligned roadmap for listed issuers.¹² India mandated BRSR for the top 1,000 listed companies.¹⁴

It became audited

Australia's assurance standards took effect for periods beginning 1 January 2025, escalating to **reasonable assurance over all climate disclosures** from 1 July 2030.⁷ Numbers now need an evidence trail.

And it became forward-looking

The hardest requirement isn't last year's emissions — it's **climate scenario analysis** and a **transition plan**: a defensible account of how the business survives futures that haven't happened yet.^{6,10}

The number that changed supervisory minds.

~19%

reduction in global income by 2050 to which the world economy is **already committed** — largely independent of near-term emissions choices. Equivalent to roughly **US\$38 trillion a year** in damages by 2050 (likely range US\$19–59 trillion).¹

Peer-reviewed in *Nature*, this reframed climate from a long-horizon externality into a **near-term balance-sheet problem**. Supervisors responded in kind: the NGFS Phase V scenarios published in November 2024 project physical-risk GDP losses **two to four times higher** than earlier vintages.²

¹⁹ World Bank — State and Trends of Carbon Pricing 2025 · 10 Jun 2025

One standard is winning.

The ISSB's IFRS S1/S2 has become the common denominator. Australia's AASB S2 is built on it. Singapore's roadmap is explicitly ISSB-aligned. That convergence is the single most useful fact for any company reporting in more than one market.

CAPITALISATION³

WHAT THAT MEANS IN PRACTICE

- **One inventory, three filings.** A GHG inventory built to the GHG Protocol feeds AASB S2, Singapore's ISSB-aligned disclosures and BRSR alike.
- **The pillars are the same everywhere** — governance, strategy, risk management, metrics & targets — because they all inherit the TCFD architecture.⁶
- **The divergence is in timing and thresholds**, not substance. Which is exactly what the next four slides map.

³ IFRS Foundation — jurisdictional profiles on ISSB Standards adoption · 12 Jun 2025

⁶ AASB S2 — Climate-related Disclosures · Sep 2024

Who has to report, when.

First mandatory reporting period by cohort. Solid = mandatory disclosure in force; translucent = assurance obligation begins.

Australia phases by **company size**.⁴ Singapore phases by **listing status and market cap**, and moved several dates back in August 2025.¹¹ India phases by **market-cap rank**.¹⁴ Three different gating rules — one underlying inventory.

4 Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 · 9 Sep 2024
11 ACRA & SGX RegCo — Extended timelines for most climate reporting requirements · 25 Aug 2025
14 SEBI — BRSR & BRSR Core assurance framework · Jul 2023

The widest net in the region.

Australia legislated climate reporting into the Corporations Act. An entity is captured if it meets **at least two of three** criteria — and the thresholds fall sharply with each group, pulling in the mid-market by 2027.^{4,5}

COHORT	REVENUE	GROSS ASSETS	EMPLOYEES	FIRST PERIOD BEGINS
Group 1	≥ A\$500m	≥ A\$1bn	≥ 500	on/after 1 Jan 2025
Group 2	≥ A\$200m	≥ A\$500m	≥ 250	on/after 1 Jul 2026
Group 3	≥ A\$50m	≥ A\$25m	≥ 100	on/after 1 Jul 2027

Two more doors in

NGER reporters are captured regardless of size — large NGER reporters land in Group 1. Asset owners with **≥ A\$5bn** under management are captured from Group 2.⁵

Group 3 is the story

At A\$50m revenue, the obligation reaches companies with no sustainability function, no consultant retainer and no reporting software — the segment the incumbent tools were never priced for.

4 Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 · 9 Sep 2024

5 ASIC Regulatory Guide 280 – Sustainability reporting (MR 25-051) · 31 Mar 2025

Four pillars, then the hard part.

PILLAR	REQUIREMENT
Governance	Board and management processes, controls and procedures for monitoring and overseeing climate risks and opportunities.
Strategy	Material climate risks and opportunities, current and anticipated financial effects, transition plans — and climate scenario analysis to assess resilience.
Risk management	Processes to identify, assess, prioritise and monitor climate-related risks.
Metrics & targets	Scope 1 and 2 from Year 1. Material Scope 3 from Year 2.

THE ASSURANCE RAMP – LIMITED TO REASONABLE

Assurance standards ASSA 5000/5010 apply to periods beginning on or after 1 Jan 2025; **reasonable assurance over all climate disclosures from 1 July 2030.**⁷ ASIC's RG 280 also provides a fixed three-year, regulator-only liability window from 1 Jan 2025 for Scope 3, scenario analysis, transition plans and forward-looking statements — **not blanket immunity.**⁵

6 AASB S2 – Climate-related Disclosures • Sep 2024
7 AUASB – ASSA 5000 / ASSA 5010 sustainability assurance standards • Jan 2025
5 ASIC Regulatory Guide 280 – Sustainability reporting (MR 25-051) • 31 Mar 2025

APRA priced the protection gap.

In March 2026 APRA published *Mind the Gap* — a prudential stress test of how a changing climate affects home-insurance affordability out to 2050 under two severe-but-plausible scenarios. It is the clearest published example of what regulators now mean by climate stress testing.⁸

1 in 4

HOUSEHOLDS IN FREESTANDING PROPERTIES
UNINSURED BY 2050 — FROM 1 IN 7 TODAY⁸

\$16_{bn}

EXPECTED NATIONAL ANNUAL WEATHER-PERIL
LOSSES
BY 2050, FROM UNDER \$7BN IN 2024⁸

EXPECTED NATIONAL WEATHER-PERIL LOSSES, A\$ PER YEAR⁸

The gap widens most in regional and rural Australia — areas with greater weather exposure and lower average incomes.⁸ APRA's earlier 2022 banking assessment of the five largest banks found losses concentrated in northern-Australia mortgages and in transition-exposed business lending.⁹

⁸ APRA — “Mind the Gap: An Insurance Climate Vulnerability Assessment” · 24 Mar 2026

⁹ APRA — Climate Vulnerability Assessment results (five largest banks) · Nov 2022

MAS made transition planning supervisory.

On **5 March 2026** MAS issued three Guidelines on Environmental Risk Management — Transition Planning, separately for **banks, insurers and asset managers**. They take effect from **September 2027** after an 18-month transition period, as an addendum to the 2020 Environmental Risk Management guidelines.¹⁰

Risk-proportionate

FIs must establish a transition-planning process proportionate to the risk profile of their business model and the local circumstances of their operations.¹⁰

Engagement, not exit

The guidelines emphasise engaging and supporting clients through transition rather than withdrawing financing — resilience built through stewardship.¹⁰

Why this reaches far beyond finance

If your bank, insurer or asset manager is supervised on the credibility of **its portfolio's** transition, then its questions become **your** disclosure requirements — regardless of whether your own company is in scope for mandatory reporting. MAS's 2023 Financial Stability Review had already found a disorderly transition materially more costly for banks and insurers than an early, orderly one.²⁰

¹⁰ MAS — Guidelines on Environmental Risk Management: Transition Planning · 5 Mar 2026

²⁰ MAS — Financial Stability Review 2023 (transition-risk analysis) · Nov 2023

Deferral is not cancellation.

On **25 August 2025** ACRA and SGX RegCo extended most climate-reporting deadlines, citing the uncertain global economic landscape and varying company readiness.¹¹ The direction did not change — the runway did.

COHORT	WAS	NOW
Large non-listed cos rev ≥ S\$1bn and assets ≥ S\$500m	FY2027 · Scope 1 & 2	FY2030
Large non-listed cos external limited assurance	FY2029	FY2032
Listed, non-STI ≥ S\$1bn mkt cap other ISSB-based disclosures	FY2025	FY2028
Listed, non-STI < S\$1bn mkt cap	FY2025	FY2030

The strategic read

Companies that treat a deferral as a reprieve will meet FY2030 with the same standing start they would have had in FY2027. Companies that use it build **three extra years of baseline data** — which is exactly what makes scenario analysis and assurance survivable when they arrive.

11 ACRA & SGX RegCo — Extended timelines for most climate reporting requirements · 25 Aug 2025

12 ACRA & SGX RegCo — Climate reporting & assurance roadmap for Singapore · 28 Feb 2024

A carbon price that nearly doubled.

Singapore was the first economy in Southeast Asia to price carbon, under the Carbon Pricing Act in force from 1 January 2019. The rate applies to facilities emitting $\geq 25,000$ tCO₂e a year.¹³

BRSR: assurance arrives by rank.

SEBI's Business Responsibility and Sustainability Reporting has been mandatory for the **top 1,000 listed companies by market capitalisation** since FY2022–23. The consequential change is BRSR Core — a defined set of KPIs subject to assurance, phased down the market-cap ranking.¹⁴

BRSR CORE ASSURANCE — PHASE-IN BY MARKET-CAP RANK ¹⁴

Why India matters to the regional picture

BRSR is not ISSB — it carries its own KPI structure and a broader social dimension. A group operating across Singapore, Australia and India therefore needs one **emissions inventory** feeding three **different disclosure grammars**. That translation layer is where most reporting cost actually accumulates.

14 SEBI — BRSR & BRSR Core assurance framework · Jul 2023

The four futures you must now model.

Scenario analysis is the requirement companies most often get wrong — treating it as a narrative rather than a quantified exercise. The NGFS scenarios, updated to Phase V in November 2024, are the reference set supervisors and central banks use.²

Phase V also raised projected physical damages **two- to four-fold** against earlier vintages² — which is why the same scenario run two years ago now returns a materially worse answer.

² NGFS — Phase V long-term climate macro-financial scenarios (v5.0) · Nov 2024

What separates a plan from a pledge.

A net-zero target is not a transition plan. The UK Transition Plan Taskforce framework (October 2023) became the reference for what a credible plan contains — and its disclosure materials now sit with the IFRS Foundation, aligning it with the ISSB baseline.¹⁵

- **Ambition** — a strategic objective with interim targets, not a 2050 endpoint alone.
- **Action** — the specific decisions in products, operations, policy and finance that deliver it.
- **Accountability** — governance, remuneration linkage, skills, and reporting against milestones.
- **Financial resourcing** — the capital allocation that makes the plan real rather than aspirational.

The test regulators apply

Both Australia's AASB S2 and MAS's guidelines converge on the same question: **can you show the working?** A plan that cannot be traced to an emissions baseline, a scenario run and a capital decision is a marketing document — and increasingly, a litigation surface.^{6,10}

¹⁵ UK Transition Plan Taskforce — Disclosure Framework · 9 Oct 2023

⁶ AASB S2 — Climate-related Disclosures · Sep 2024

¹⁰ MAS — Guidelines on Environmental Risk Management: Transition Planning · 5 Mar 2026

Disclosure is the on-ramp to finance.

Reporting obligations are not an accounting curiosity — they are the mechanism by which capital gets allocated. The IEA's Net Zero Roadmap put annual clean-energy investment needs at **~US\$4.5 trillion a year by the early 2030s**, from a record ~US\$1.8 trillion in 2023.¹⁶

ANNUAL CLEAN-ENERGY INVESTMENT, US\$ TRILLION¹⁶

Where the gap actually sits

More than **80%** of clean-energy investment currently occurs in advanced economies and China. Annual capital spending in emerging and developing economies excluding China must expand **more than seven-fold, to above US\$1 trillion a year**, by the end of this decade.¹⁶ Disclosure quality is the gating factor for a large share of that flow.

¹⁶ IEA — Net Zero Roadmap: A Global Pathway to Keep the 1.5 °C Goal in Reach · Sep 2023

Three numbers that get wrongly conflated.

Almost every confused claim about "the carbon market" comes from mixing these up. They measure different things and none of them substitutes for another.

SIGNAL	2024 FIGURE	WHAT IT TELLS YOU
Credits issued	305 million ¹⁸	Supply entering the market
Credits retired	180 million ¹⁸	Genuine demand — the number that matters
Unretired inventory	~1 billion ¹⁹	A supply overhang suppressing price
2030 projection	US\$7–35bn ¹⁸	The range reflects real uncertainty, not consensus

17 Ecosystem Marketplace (Forest Trends) — State of the Voluntary Carbon Market 2025 · 29 May 2025

18 MSCI Carbon Markets — “Carbon Credits Come of Age in 2025” · 2025

19 World Bank — State and Trends of Carbon Pricing 2025 · 10 Jun 2025

The obligation scaled down. The tooling didn't.

Put the three markets together and a specific population emerges: companies large enough to be captured, small enough to have no sustainability function. Australia's Group 3 alone reaches A\$50m-revenue businesses from July 2027.⁴

What they're asked for

A GHG inventory to the GHG Protocol. Scope 3 by year two. Quantified scenario analysis. A transition plan. An audit trail that survives limited — then reasonable — assurance.^{6,7}

What they have

A finance lead with a spreadsheet, a quote from a consultancy priced for an ASX 50 balance sheet, and enterprise software with a procurement cycle longer than the runway to their first filing.

The mismatch, plainly

The standards were written with large filers in mind and then extended downward by threshold. The **tools** were built for the large filers and never extended downward at all. That gap — not the regulation — is what makes compliance feel impossible in the mid-market.

⁴ Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 · 9 Sep 2024

⁶ AASB S2 — Climate-related Disclosures · Sep 2024

⁷ AUASB — ASSA 5000 / ASSA 5010 sustainability assurance standards · Jan 2025

ReGenesis Impact.

The same disclosure workflow the large filers buy — as tools you can open and use, in the browser, without a sales call.

OBLIGATION	THE TOOL
GHG inventory Scope 1, 2 and 3	Emissions calculators built on the GHG Protocol, holding the inventory year over year so the second cycle starts from the first.
ISSB S2 · AASB S2	Disclosure hubs structured to the four pillars — you supply numbers, not a template.
BRSR	India's KPI structure mapped against the same underlying inventory.
Scenario analysis	Physical and transition risk screening against NGFS-style pathways.
Transition planning	Ambition → action → accountability → resourcing, in the TPT structure.
Assurance readiness	An evidence trail assembled as you work, for limited and reasonable assurance.
Carbon credits	Portfolio and retirement tracking, with PCAF-aligned financed-emissions treatment.

Free to use. No sign-up to start. Built for Singapore, Australia and India because that is where the deadlines actually land.

Five moves, in order.

- **Establish which cohort you are in — and when.** Size thresholds in Australia, listing status and market cap in Singapore, market-cap rank in India. The date drives everything else.^{4,11,14}
- **Build the Scope 1 and 2 inventory now, even if you report later.** Assurance tests prior-year comparatives. A baseline started in the reporting year is a baseline with no history.
- **Map Scope 3 categories before you measure them.** Material Scope 3 lands in year two in Australia.⁶ Knowing which categories are material is a scoping exercise you can complete now.
- **Run scenario analysis as a quantified exercise, not a workshop.** Phase V raised damages two- to four-fold;² a qualitative narrative will not survive assurance.
- **Keep the evidence trail from day one.** Reasonable assurance over all climate disclosures arrives in Australia from 1 July 2030⁷ — retrofitting an audit trail costs more than maintaining one.

The compounding asset

Every one of these gets cheaper with time and more expensive with delay. That asymmetry — not the regulation itself — is the real argument for starting in the quarter you first hear about it.
