CARBON-PRICING REVENUE,
2024¹⁹

The 2024 revisions are why a scenario analysis run two years ago now returns a materially worse answer on the same inputs.²

¹ Kotz, Levermann & Wenz — “The economic commitment of climate change”, Nature 628 · 17 Apr 2024

² NGFS — Phase V long-term climate macro-financial scenarios (v5.0) · Nov 2024

¹⁹ World Bank — State and Trends of Carbon Pricing 2025 · 10 Jun 2025

One standard, three filings.

MARKET	STANDARD	RELATIONSHIP TO ISSB
Australia	AASB S2 Climate-related Disclosures ⁶	built on IFRS S2
Singapore	ISSB-based climate disclosures ¹²	directly aligned
India	BRSR / BRSR Core ¹⁴	separate KPI structure

All three inherit the TCFD architecture — governance, strategy, risk management, metrics & targets.⁶ **The divergence is in timing and thresholds, not substance.** One GHG inventory feeds all three; the cost sits in the translation between them.

3 IFRS Foundation — jurisdictional profiles on ISSB Standards adoption · 12 Jun 2025
6 AASB S2 — Climate-related Disclosures · Sep 2024
12 ACRA & SGX RegCo — Climate reporting & assurance roadmap for Singapore · 28 Feb 2024
14 SEBI — BRSR & BRSR Core assurance framework · Jul 2023

Who reports, when.

Solid = mandatory disclosure in force. Translucent = assurance obligation begins.

Gating rule differs by market: **company size** in Australia,⁴ **listing status and market cap** in Singapore,¹¹ **market-cap rank** in India.¹⁴

4 Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 · 9 Sep 2024
11 ACRA & SGX RegCo – Extended timelines for most climate reporting requirements · 25 Aug 2025
14 SEBI – BRSR & BRSR Core assurance framework · Jul 2023

Two of three criteria.

An entity is captured if it meets **at least two of the three** thresholds for its group.^{4,5}

COHORT	REVENUE	GROSS ASSETS	EMPLOYEES	FIRST PERIOD BEGINS
Group 1	≥ A\$500m	≥ A\$1bn	≥ 500	on/after 1 Jan 2025
Group 2	≥ A\$200m	≥ A\$500m	≥ 250	on/after 1 Jul 2026
Group 3	≥ A\$50m	≥ A\$25m	≥ 100	on/after 1 Jul 2027

Two non-size doors

NGER reporters are captured regardless of size — large NGER reporters land in Group 1. Asset owners with **≥ A\$5bn** under management are captured from Group 2.⁵

Where it bites

Group 3 sets the floor at **A\$50m revenue and 100 employees** — companies that typically carry no sustainability function and no reporting software.

4 Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 • 9 Sep 2024

5 ASIC Regulatory Guide 280 – Sustainability reporting (MR 25-051) • 31 Mar 2025

Four pillars. Two assurance gates.

PILLAR	REQUIREMENT
Governance	Board and management processes, controls and procedures for overseeing climate risks and opportunities.
Strategy	Material risks and opportunities, anticipated financial effects, transition plans, and climate scenario analysis to assess resilience.
Risk management	Processes to identify, assess, prioritise and monitor climate risks.
Metrics & targets	Scope 1 and 2 from Year 1. Material Scope 3 from Year 2.

ASSURANCE RAMP ⁷

ASSA 5000/5010 apply to periods beginning on or after 1 Jan 2025; reasonable assurance over all climate disclosures from **1 Jul 2030**.⁷ ASIC's RG 280 gives a fixed three-year, regulator-only liability window from 1 Jan 2025 for Scope 3, scenario analysis, transition plans and forward-looking statements — **not blanket immunity**.⁵

6 AASB S2 – Climate-related Disclosures • Sep 2024
7 AUASB – ASSA 5000 / ASSA 5010 sustainability assurance standards • Jan 2025
5 ASIC Regulatory Guide 280 – Sustainability reporting (MR 25-051) • 31 Mar 2025

APRA priced the protection gap.

Mind the Gap, March 2026 — a prudential stress test of home-insurance affordability to 2050 under two severe-but-plausible scenarios.⁸

1 in 4

HOUSEHOLDS IN FREESTANDING PROPERTIES
UNINSURED
BY 2050 — FROM 1 IN 7 TODAY⁸

\$16_{bn}

EXPECTED NATIONAL ANNUAL WEATHER-PERIL
LOSSES
BY 2050, FROM UNDER \$7BN IN 2024⁸

EXPECTED NATIONAL WEATHER-PERIL LOSSES, A\$ PER YEAR⁸

2024 baseline shown recessive

The gap widens most in regional and rural Australia — greater weather exposure, lower average incomes.⁸ APRA's 2022 assessment of the five largest banks found losses concentrated in northern-Australia mortgages and transition-exposed business lending.⁹

⁸ APRA — “Mind the Gap: An Insurance Climate Vulnerability Assessment” · 24 Mar 2026

⁹ APRA — Climate Vulnerability Assessment results (five largest banks) · Nov 2022

Transition planning is now supervisory.

5 Mar

2026

GUIDELINES ISSUED¹⁰

Sep

2027

EFFECTIVE, AFTER AN 18-MONTH TRANSITION¹⁰

3

SETS — BANKS, INSURERS, ASSET MANAGERS¹⁰

EXPECTATION	WHAT IT REQUIRES
Risk-proportionate	A transition-planning process proportionate to the risk profile of the business model and the local circumstances of operations. ¹⁰
Engagement over exit	Engaging and supporting clients through transition rather than withdrawing financing. ¹⁰
Addendum, not replacement	Sits on top of the existing Environmental Risk Management guidelines. ¹⁰

Second-order effect: a supervised lender or insurer is assessed on its portfolio's transition. Its diligence questions become your disclosure requirements — whether or not your own company is in scope. MAS's 2023 Financial Stability Review already found a disorderly transition materially more costly for banks and insurers than an early, orderly one.²⁰

¹⁰ MAS — Guidelines on Environmental Risk Management: Transition Planning • 5 Mar 2026

²⁰ MAS — Financial Stability Review 2023 (transition-risk analysis) • Nov 2023

Deferred, not cancelled.

ACRA and SGX RegCo extended most climate-reporting deadlines on **25 August 2025**, citing the uncertain global economic landscape and varying company readiness.¹¹

COHORT	WAS	NOW
Large non-listed cos rev ≥ S\$1bn and assets ≥ S\$500m	FY2027 • Scope 1 & 2	FY2030
Large non-listed cos external limited assurance	FY2029	FY2032
Listed, non-STI ≥ S\$1bn mkt cap other ISSB-based disclosures	FY2025	FY2028
Listed, non-STI < S\$1bn mkt cap	FY2025	FY2030

Assurance tests prior-year comparatives. A company that starts its baseline in the reporting year arrives at FY2030 with no history — the same standing start it would have had in FY2027.

11 ACRA & SGX RegCo — Extended timelines for most climate reporting requirements • 25 Aug 2025

12 ACRA & SGX RegCo — Climate reporting & assurance roadmap for Singapore • 28 Feb 2024

S\$5 to S\$45 in three years.

Assurance walks down the ranking.

BRSR has been mandatory for the **top 1,000 listed companies by market capitalisation** since FY2022–23. BRSR Core adds a defined KPI set subject to assurance, phased by market-cap rank.¹⁴

BRSR CORE ASSURANCE — PHASE-IN BY MARKET-CAP RANK¹⁴

The translation cost

BRSR is not ISSB — it carries its own KPI structure and a broader social dimension. A group operating across all three markets needs **one emissions inventory feeding three different disclosure grammars**. That translation layer is where most reporting cost accumulates.

¹⁴ SEBI — BRSR & BRSR Core assurance framework • Jul 2023

Four futures, quantified.

NGFS Phase V (v5.0), November 2024 — the reference set supervisors and central banks use.²

AASB S2 requires scenario analysis as a resilience assessment, not a narrative.⁶ Phase V raised projected physical damages **two- to four-fold** against earlier vintages.²

² NGFS — Phase V long-term climate macro-financial scenarios (v5.0) · Nov 2024
⁶ AASB S2 — Climate-related Disclosures · Sep 2024

A target is not a plan.

The UK Transition Plan Taskforce framework (October 2023) is the reference for what a credible plan contains; its disclosure materials now sit with the IFRS Foundation, aligning it to the ISSB baseline.¹⁵

ELEMENT	WHAT IT MUST CONTAIN
Ambition	A strategic objective with interim targets — not a 2050 endpoint alone.
Action	Specific decisions in products, operations, policy and finance that deliver it.
Accountability	Governance, remuneration linkage, skills, and reporting against milestones.
Financial resourcing	The capital allocation that makes the plan real rather than aspirational.

The test being applied

AASB S2 and the MAS guidelines converge on one question: **can you show the working?** A plan that cannot be traced to an emissions baseline, a scenario run and a capital decision is a marketing document — and, under mandatory reporting, a litigation surface.^{6,10}

Three numbers, three different things.

SIGNAL	2024 FIGURE	WHAT IT INDICATES
Credits issued	305 million ¹⁸	Supply entering the market
Credits retired	180 million ¹⁸	Genuine demand — the number that matters
Unretired inventory	~1 billion ¹⁹	Supply overhang suppressing price
2030 projection	US\$7–35bn ¹⁸	Range reflects real uncertainty, not consensus

17 Ecosystem Marketplace (Forest Trends) — State of the Voluntary Carbon Market 2025 · 29 May 2025

18 MSCI Carbon Markets — “Carbon Credits Come of Age in 2025” · 2025

19 World Bank — State and Trends of Carbon Pricing 2025 · 10 Jun 2025

The obligation scaled down. The tooling didn't.

Australia's Group 3 floor is **A\$50m revenue and 100 employees** from July 2027.⁴

Singapore's large non-listed cohort reaches **S\$1bn revenue and S\$500m assets** by FY2030.¹¹ Both capture companies well below the profile the reporting software was built for.

Required

GHG inventory to the GHG Protocol. Material Scope 3 by year two. Quantified scenario analysis. A transition plan. An audit trail that survives limited — then reasonable — assurance.^{6,7}

Typically available

A finance lead with a spreadsheet, a consultancy quote priced against an ASX 50 balance sheet, and enterprise software with a procurement cycle longer than the runway to the first filing.

The standards were written for large filers and extended downward by threshold. The tools were built for large filers and not extended downward at all. **That gap — not the regulation — is the binding constraint in the mid-market.**

⁴ Treasury Laws Amendment (Financial Market Infrastructure and Other Measures) Act 2024, Sch. 4 · 9 Sep 2024

¹¹ ACRA & SGX RegCo — Extended timelines for most climate reporting requirements · 25 Aug 2025

⁶ AASB S2 — Climate-related Disclosures · Sep 2024

⁷ AUASB — ASSA 5000 / ASSA 5010 sustainability assurance standards · Jan 2025

ReGenesis Impact.

The disclosure workflow large filers buy — as tools you open in a browser, free, without a sales call.

OBLIGATION	THE TOOL
GHG inventory Scope 1, 2 and 3	Calculators built on the GHG Protocol, holding the inventory year over year so the second cycle starts from the first.
ISSB S2 · AASB S2	Disclosure hubs structured to the four pillars — you supply numbers, not a template.
BRSR	India's KPI structure mapped against the same underlying inventory.
Scenario analysis	Physical and transition risk screening against NGFS-style pathways.
Transition planning	Ambition, action, accountability and resourcing in the TPT structure.
Assurance readiness	An evidence trail assembled as you work, for limited and reasonable assurance.
Carbon credits	Portfolio and retirement tracking, with PCAF-aligned financed-emissions treatment.

Five moves, in order.

- **Establish your cohort and date.** Size thresholds in Australia, listing status and market cap in Singapore, market-cap rank in India.^{4,11,14}
- **Build the Scope 1 and 2 inventory now, even if you report later.** Assurance tests prior-year comparatives; a baseline started in the reporting year has no history.⁷
- **Map Scope 3 categories before measuring them.** Material Scope 3 lands in year two in Australia⁶ — identifying which categories are material is a scoping exercise you can finish now.
- **Run scenario analysis as a quantified exercise.** Phase V raised damages two- to four-fold;² a qualitative narrative will not survive assurance.
- **Keep the evidence trail from day one.** Reasonable assurance over all climate disclosures arrives 1 July 2030 in Australia⁷ — retrofitting an audit trail costs more than maintaining one.

Every one of these gets cheaper with time and more expensive with delay. That asymmetry is the argument for starting in the quarter you first hear about it.
